

Transcript – Your Turn

Here is another opportunity for you to determine which of the mathematical process standards are being integrated with the content standards. This example may not be in your content area. Remember, we are looking at the process standards, which are the same for all areas.

Transcript – Your Turn: Example II

In this example, content standard G(9)(A) is being paired with mathematical process standards G(1)(A) and G(1)(B). The students are given an everyday contextual situation. They must analyze the given information in order to develop a plan to determine whether a ramp will meet ADA specifications, as well as justify their solutions.
